WORKPLACE CHARGING SOLUTIONS

Connekt are an electric vehicle charging network and installer which provides an all-in-one facility through our bespoke cloud-based operating system to allow our clients to provide EV charging to their customers & employees however they desire.

With the rising costs of electricity rates & the continual rapid growth in electric car sales, employees and the public are using existing EV charging facilities at workplaces and business car parks for free.

Given the rising uptake of electrical vehicles among the workforce, Company directors and business owners are finding that their existing charging facilities is just like having a traditional petrol pump in the car park and are having to absorb this cost with no means of recovering the cost in electricity as a result.

Businesses need to be able to quantify this electricity usage for electric vehicles to show the overall costs each year and report to HMRC to claim available tax reliefs.

This is where we come in.

We understand that you want to focus your time on the core of your business, so the team and Connekt will take care of your charging needs.

HOW DOES IT WORK?

One of Connekt's EV charging specialists will meet with you to understand your company's desired goals and outcome of your new facility. This meeting will include discussions on the desired location of the charge points, the existing electrical infrastructure and how Connekt can provide your business with a future proof charging solution.

Decide how you want to provide your EV charging facilities to your employees.

Connekt's specialist team will integrate your new charging stations into our bespoke software to suit your desired requirements.

Connekt's specialist installers will then install your new charging points, link them to our 'Get Connekted' network and set up everything you need to provide an innovative incentive for your employees.

Connekting your chargers to work for you

Centralised Charging Hub

Provide your EV charging facilities for no cost to employees and track electricity spend for providing accurate reports to HMRC to claim available tax relief.

Benefit in Kind (BIK) tax

Track EV employee electricity usage and gain tax relief through Benefit in Kind tax.

Charge As You Go

You can provide your employees with monthly charge allowances where they are able to top up their charge credit on demand once they have used their allocated amount.

Provide an innovative incentive
for your employees.

Connekt's solution to EV charging at your workplace

APP ONLY ACCESS

Drivers sign up with Connekt

You are in control of who uses your chargers and we set up everything for you and your employees. Drivers are required to sign up to the Get Connekted app and input their login credentials provided by Connekt. This means only pre-authorised users can use your charging points.

TAILORED PRICE PLANS

Preferential tariffs for your employees

Businesses can provide their employees with preferential charging tariffs at their workplace.

HAVE FULL CONTROL OVER YOUR CHARGING SOLUTION

For generating reports

Log in to your Connekt portal and run reports to track electricity usage on your charging stations that is specific on a per-employee basis.

OPEN YOUR CHARGERS TO THE PUBLIC

Pay for your EV infrastructure by providing charging facilities to the Public.

If your business is located in a busy industrial estate or near a main road why not open your charging stations up to the public and other businesses and create a new revenue stream.
